Daniel Whelan Reflective Statement

I did most of the research for the project, helping Baely and Greg when it came to command syntax as well as what security features we should implement. I had a fair bit more knowledge when it came to the Linux command line and was able to help Baely with the practicality of it all by limiting the time he spent researching commands. This meant our project was done much quicker. Furthermore, I used previous work from second year to refer to ethical hacking and what issues the test server had then. Furthermore, I gave Baely all the documentation he used for the project. Finally, my placement was with an enterprise server management team and it allowed me to have further experience with Linux and its command line.
